

Some people live in the middle of the jungle. Their homes are raised from the ground on stilts to help protect them from forest creatures and to keep them dry in the rainy season, when the river rises and floods the land.

This village is in the Amazon rainforest in Brazil. It is a long way from the nearest town, so the people get most of what they need from the forest.

They build their homes using jungle vines and wood. They fish in the river, and instead of cars, they travel by boat!

In another part of the world, people live in huts made from mud and sticks. The homes are surrounded by a thorny fence that protects the village from wild animals that live nearby. Come and take a closer look . . .

The Maasai people live on the baking-hot grasslands of Kenya in Africa. They spend the day looking after their cows and goats. Look! The women of the village are building a new hut . . .

The rolling grasslands are also home to elephants, giraffes, zebras and lions!

First they make a frame of sticks. Then they cover it with mud and cow dung, which dries hard in the sun.

We've been around the world visiting homes in big cities and tiny towns, in deserts and jungles. We've even met people who live underground. Now let's see what it's like to live in outer space!

The astronauts are carried up into space in rockets.

Where do you call home?

Some astronauts live and work in a home called a space station, which zooms through space high above the Earth.

This astronaut is wearing a space suit and is tied to the station to stop her floating away!
